## ABSTRACT

5

This invention concerns an agent for preventing and curing arteriosclerosis, which has as an active component thereof a chromanol glucoside represented by the following general formula (1)

$$\begin{array}{c}
R^{5}O \\
2R \\
R^{3}
\end{array}$$

$$\begin{array}{c}
(CH_{2})_{n}(X)_{m} \\
(1)
\end{array}$$

(wherein  $R^1$ ,  $R^2$ ,  $R^3$ , and  $R^4$  are the same or different and are each a hydrogen atom or a lower alkyl group,  $R^5$  is a hydrogen atom, a lower alkyl group, or a lower acyl group, X is a monosaccharide residue or an oligosaccharide residue optionally having a lower alkyl group or a lower acyl group substitute for the hydrogen atom of the hydroxyl group in the saccharide residue, n is an integer in the range of 0 - 6, and m is an integer in the range of 1 - 6). This agent is capable of effectively acting on the affected part safety at a small application rate and preventing and curing arteriosclerosis.
